Titus Kariuki Kinyanjui

jobs.tituskariuki@gmail.com • (254)742143102 • linkedin.com/in/titus-kariuki-kinyanjui/ • github.com/CodeK254

TECHNICAL SKILLS

Programming languages: Dart, Golang and Kotlin, SQL
Frameworks: Jetpack Compose, Flutter
Techical Tools: Git, Zoho
AI & Developer Tools: Stitch, VSCode, Android Studio, Sentry, Copilot, Claude, Codex
Operating Systems: Windows, Linux, MacOS

PROFESSIONAL EXPERIENCE

Volane International — Mobile Developer Consultant

DECEMBER 2024 -PRESENT, NAIROBI

Working as a mobile developer at Volane, implementing mobile solutions for LPG companies, maintaining and enhancing existing apps for performance optimization and robustness,

Strengthened application security by implementing anti–code hooking mechanisms and rooted device detection, significantly reducing exposure to runtime manipulation and compromised device risks.
Led client engagements during the implementation of security features, translating complex technical safeguards into business-aligned solutions and building stakeholder confidence.
Conducted detailed Root Cause Analyses (RCA) for production incidents, identifying systemic failures and implementing long-term corrective measures to prevent recurrence.
Delivered end-to-end feature implementations aligned with security standards, maintainability best practices, and evolving business requirements.
Integrated secure RESTful APIs and third-party services with robust validation and error-handling mechanisms to enhance system resilience and reliability.
Led ongoing maintenance and performance optimization of existing mobile applications, improving stability, scalability, and overall service quality.
Proactively identified, documented, and resolved defects during testing cycles, increasing pre-release reliability and reducing production issues.

ReTrade MarketPlace — Backend Engineer

DECEMBER 2025 -PRESENT, NAIROBI

Designed and maintained RESTful API endpoints in Go for key e-commerce flows, including product catalogs, cart management, and checkout operations.
Implemented Safaricom Daraja M-Pesa payment gateway integrations (STK Push, C2B, and B2C) along with webhooks for secure real-time transaction processing.
Built concurrent data collection pipelines and background worker pools using Go channels and goroutines to process asynchronous tasks efficiently.
Optimized database queries and schema designs using PostgreSQL/MySQL to improve query latency for high-traffic inventory and order lookup tables.
Containerized backend services using Docker and configured lightweight deployment pipelines on cloud hosting platforms such as Render and Railway.
Structured middleware for JWT-based authentication, logging, and error handling, incorporating error tracking through Sentry.

Radar Telematics, Nairobi — IT Support Technician

JUNE 2024 - SEPTEMBER 2024, NAIROBI

Configured and calibrated vehicle speed governors to ensure regulatory compliance and enhance fleet safety standards for client vehicles.
Monitored speed governor performance and system alerts, proactively identifying anomalies to minimize fleet risk and reduce potential liability for clients.
Coordinated and assigned technicians for routine vehicle inspections, maintenance, and telematics device installations, improving service turnaround time and operational efficiency.
Managed invoicing for speed governors, vehicle cameras, alert systems, and GPS tracker installations using QuickBooks, ensuring accurate billing and streamlined financial reconciliation.
Verified and reconciled client payments within QuickBooks, contributing to improved cash flow tracking and reduced accounting discrepancies.

Developed lightweight desktop automation tools to reduce manual administrative workload, increasing office productivity and minimizing repetitive task errors.

Lapsset Corridor and Development Authority, Nairobi — IT Support Attache.

JUNE 2023 - SEPTEMBER 2023, NAIROBI

Supported the ICT department in maintaining secure and reliable computing infrastructure across the organization, ensuring minimal operational downtime.
Facilitated device procurement, configuration, and deployment, improving onboarding efficiency and standardizing hardware/software environments.
Monitored organizational computing assets, proactively troubleshooting hardware and software issues to enhance system stability and user productivity.
Installed and configured operating systems with necessary security patches and enterprise tools, strengthening endpoint security posture.

Conducted routine equipment inspections, system updates, and preventive maintenance to extend device lifecycle and reduce unexpected failures.

PROJECTS

AI Assisted Surveillance | Africas Talking Hackathon & KarU Startup Expo **September 2023**

Collaborated with a team on 4 and developed a fully functional prototype of a security surveilance system that uses AI to flag suspicious activities and sends a notification to all configures phone numbers.
Leveraged Gemini AI's image processing engine to read security footage realtime and flag suspicious activities and faults like break-ins, fire, smoke among others.
Leveraged Africa's Talking API to send notifications to configured owner and admin phone numbers.
Awarded first place in the Africas Talking Hackathon 2024, second in the KarU Startup Expo 2024 and second in the IOT and Embedded systems in the KAPS Inter-University Hackathon 2023.

EDUCATION

Karatina University | Nyeri, Kenya **May 2024**
B.Sc. in Computer Science | Second Class Honors Upper Division
Relevant Courses: Programming, Data Structures and Algorithms, Mathematics

CERTIFICATES

Flutter Test-Driven Development with Clean Architecture – Udemy
Android Jetpack Compose: The Comprehensive Bootcamp – Udemy
The Ultimate Flutter and Firebase Course – Udemy
A complete guide to building beautiful and immersive mobile applications using **Flutter for iOS and Android** – Udemy
KAPS Inter-University Hackathon – J.K.U.A.T
3rd Karatina University Start-UP EXPO – Karatina University
4th Karatina University Start-UP EXPO – Karatina University
